

Requirements Gap Report

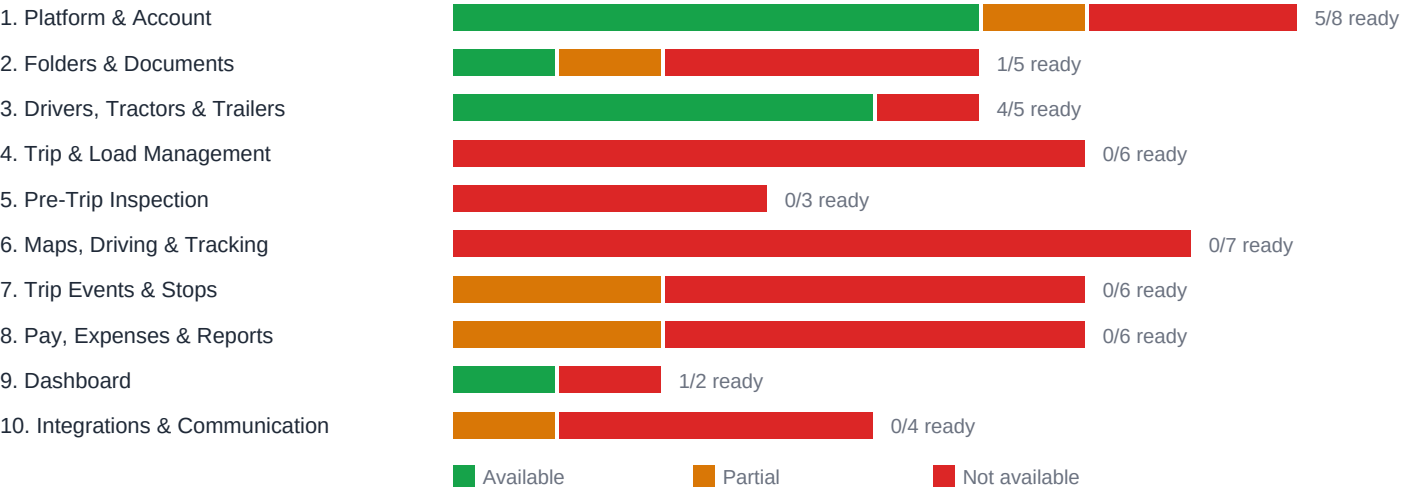

Client use cases (DOT Doc Hub) compared with the current DriverFilesHub platform
Report date: September 26, 2026

Executive summary

We compared each requirement in the client's **DOT Doc Hub** use-case document with the features built into the **DriverFilesHub** platform today. The platform already covers the core account, company, driver, tractor, trailer and document features. Most of the missing requirements are in **trip and load management** and the **driver mobile app** (maps, live tracking, trip events), plus **pay, profit, QuickBooks and messaging**. These are new modules to build.

Readiness by module

How to read this report

Available	The feature works in the current platform.
Partial	Some of the feature exists; the rest needs to be built.
Not available	The feature does not exist yet and needs to be built.

Detailed requirement status

1. Platform & Account

Requirement	Status	Current state / note
Web application / Admin application	Available	Web-based admin panel for Super Admin and companies.
Mobile application	Not available	No mobile app and no mobile API yet.
Register with email	Available	Includes email verification.
Register / login with Google and Facebook	Not available	Only email and password login today.
Login to the application	Available	Includes optional two-factor authentication (2FA).
Edit company info	Available	Company profile, logo, address and contact details.
Set permissions per role	Available	Roles: Super Admin, Company, User.
Set permissions per individual user	Partial	Permissions are managed by role; no screen for per-user permissions.

2. Folders & Documents

Requirement	Status	Current state / note
Standard set of folders	Partial	Each driver, vehicle and trailer has a fixed list of document types that works like standard folders.
Add, create, edit and delete folders	Not available	Owners cannot create their own custom folders.
Upload documents to a specific folder	Available	Upload, view, download and replace, with issue and expiry dates.
Uploaded picture converts to PDF automatically	Not available	Images are stored as images.
Download ZIP per trip, driver and whole company	Not available	Files can only be downloaded one at a time.

3. Drivers, Tractors & Trailers

Requirement	Status	Current state / note
Add a new driver	Available	From the admin panel, or by the driver through the online application link.
Update any driver's data	Available	Full driver profile editing.
Add and delete tractors by type	Available	Vehicle types, groups, VIN, unit no., year, make, model and more.
Add and delete trailers	Available	Trailer records with their own documents.
Tractor / trailer license plate number and picture	Not available	Plate number and photo fields are not stored yet.

4. Trip & Load Management

Requirement	Status	Current state / note
Create a new trip / edit trip details	Not available	To be built.
Automatic trip number and date, with owner confirmation	Not available	To be built.
Enter trip details (product, weight)	Not available	To be built.
Add shipper information and save shippers for future use	Not available	To be built.
Assign a driver to a trip / assign a load to a driver	Not available	To be built.
Confirm the assigned tractor and trailer are correct	Not available	To be built.

5. Pre-Trip Inspection

Requirement	Status	Current state / note
Fill out a pre-trip checklist	Not available	To be built.
Pre-trip inspection on one screen	Not available	To be built.
See checklist progress until finished	Not available	To be built.

6. Maps, Driving & Tracking

Requirement	Status	Current state / note
Select start and drop-off from a map (Google / Apple Maps)	Not available	To be built.
Use current location as the starting point	Not available	To be built.
Optional pickup stop between start and drop-off	Not available	To be built.
"Start driving!" button, "Trip Started" screen, open the trip folder	Not available	To be built.
See miles traveled and distance to destination	Not available	To be built.
Continue a trip that was exited	Not available	To be built.
Live location tracking of trucks and trailers	Not available	To be built.

7. Trip Events & Stops

Requirement	Status	Current state / note
"Add Stop" with a reason	Not available	To be built.
Police stop event (ticket yes/no, upload ticket or write reason)	Not available	To be built.
Weigh station event (weight OK yes/no, upload documents)	Not available	To be built.
Accident event (upload license, insurance, vehicle photos)	Partial	Past accidents and violations are recorded in the driver's history, but not as live trip events.
Breakdown event	Not available	To be built.
"Add Fuel Stop" with location, price, documents and "Done" screen	Partial	Fuel types can be set up for vehicles; fuel stops and prices are not recorded.

8. Pay, Expenses & Reports

Requirement	Status	Current state / note
Enter pay for each load	Not available	To be built.
Enter driver pay per mile and hourly rate	Not available	To be built.
Daily net profit / loss (pay minus expenses)	Partial	A profit page layout exists, but it is not connected to real data.
Timesheets (hours, overtime, double overtime)	Not available	To be built.
Reporting access	Partial	Compliance dashboards and reports exist; no trip or financial reports.
Year-end download of driver travel history, loads, hours and miles	Not available	To be built.

9. Dashboard

Requirement	Status	Current state / note
Dashboard overview	Available	Driver, vehicle, trailer and compliance summaries.
Number of loads on the road / pending pickup	Not available	Needs the Trip & Load module.

10. Integrations & Communication

Requirement	Status	Current state / note
Link to QuickBooks and send payroll data	Not available	To be built.
In-app messages	Not available	To be built.
Notify drivers of new messages	Partial	The system sends email reminders; there is no in-app chat or push notification.
Time-off requests	Not available	To be built.

Already included (not in the client's document)

The current platform also includes these features, which the client gets at no extra development cost:

Online driver application	Each company gets its own apply link, with a 10-step form, SMS (OTP) phone verification, save and resume, and status check.
Hire / reject workflow	One-click hire or reject, with automatic emails sent to the applicant.
Compliance tracking	Green, yellow and red status for every driver, vehicle and trailer document, with a 30-day early warning.
Automatic reminders	Daily email digest of missing, expiring or expired documents, plus one-click reminders.
Maintenance & service logs	Maintenance schedules and service history, with costs and receipts, for each vehicle.
Subscriptions & billing	14-day free trial, monthly and yearly plans, Stripe card payments and a self-service billing portal.

Suggested delivery phases

We suggest building the missing features in this order, so the client gets value early and each phase builds on the one before it:

Phase 1	Quick wins	Google / Facebook login, custom folders, image-to-PDF, ZIP downloads, plate number and photo fields, per-user permissions.
Phase 2	Trips & loads	Trips, shippers, load assignment, pre-trip checklist, trip events, fuel stops, trip dashboard counts.
Phase 3	Mobile app & tracking	Driver mobile app and API, maps and routing, live GPS tracking, in-app messages and notifications.
Phase 4	Money & integrations	Load pay, driver pay rates, timesheets, profit / loss reports, year-end exports, QuickBooks, time-off requests.
